More Sustainable. No Apology.

GREEN ENERGY ROADMAP.

Estimated investment of over the 4 year plan = £5m.

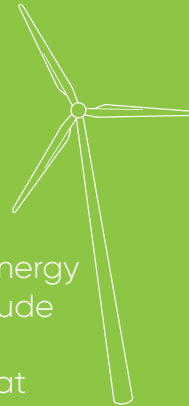

2023: Phase 1

Install 1MW of solar on the roof at The Willows Training Centre and The Waterfront Hotel.

Increasing renewable energy production on site by up to 1 mega watt

2025: Phase 2

Roll out the planned combination of energy generating supplies, which could include

- > Floating solar
- > Roof top solar
- > Wind turbines
- > Water source heat pump
- > Air source heat pumps

This will give us total energy production on site.

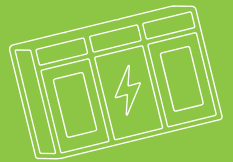

Finalise our plan to reduce our overall consumption by switching to more efficient plant and equipment.

2024: Phase 1 Continued.

Install the network infrastructure so we can distribute electricity around the 380 acre site.

Obtain the relevant planning permissions

Finalise the best combination of energy generating supplies to meet our demands.

2026 onward: Phase 3

Remove LPG and Gas from the Resort

Roll out the new plant and equipment to reduce our consumption

Evaluate if we can produce excess capacity to help businesses nearby switch to locally produced renewable energy.
